Color Atlas Of Pathophysiology Basic

Pathophysiology is the study of disordered and altered functions affecting the body's dynamic homeostasis and the concepts of illness development and progression. This course is designed to broaden the nurse's understanding of respiratory pathophysiology by exploring causes, alterations and physiology adaptations, manifestations, and resolution of disease states.

Course Content - #38820: Pathophysiology: The Respiratory ...

Diabetes mellitus (DM), commonly known as diabetes, is a group of metabolic disorders characterized by high blood sugar levels over a prolonged period. Symptoms of high blood sugar include frequent urination, increased thirst, and increased hunger. If left untreated, diabetes can cause many complications. Acute complications can include diabetic ketoacidosis, hyperosmolar hyperglycemic state ...

The red pulp of the spleen is composed of connective tissue known also as the cords of Billroth and many splenic sinusoids that are engorged with blood, giving it a red color. Its primary function is to filter the blood of antigens, microorganisms, and defective or worn-out red blood cells.. The spleen is made of red pulp and white pulp, separated by the marginal zone; 76-79% of a normal ...

Neuroanatomic comparisons between mice and humans are complicated by the phylogenetic distance between the two species. Mouse and human brains differ markedly in size and organization, particularly in the functional and structural arrangement of the cerebral cortex (). This chapter highlights major differences in the nervous system between mice and humans, emphasizing divergence in their gross ...

BASIC STRUCTURE OF NERVE CELLS ("NEURONS") "Swiftly the brain becomes an enchanted loom, where millions of flashing shuttles weave a dissolving pattern-always a meaningful pattern-though never an abiding one" (Sherrington, 1940). Nerve cells comprise the "enchanted loom" that is our brain. Here are three absolutely wonderful facts about nerve cells.

Introduction. The first known graphic example of a spinal cord injury can be seen in The Dying Lioness, a stone panel from the Assyrian Palace of Assurbanipal, c. 650 BC.1, 2 The panel depicts a lioness injured by arrows transversing its back and trying to crawl with clearly paralyzed lower extremities. It is clear that the Assyrians had an understanding of basic cord function.

Cavernous malformations (CMs) account for 5% to 13% of vascular lesions of the central nervous system. Historically, these lesions have been considered quite rare. 1 - 3 With the advent of magnetic resonance imaging (MRI), however, the diagnosis of cerebral CMs has increased. They are now understood to be more common than was appreciated before MRI was available, with an incidence of 0.4% to ...
