Decanter Centrifuge | eBay

A decanter centrifuge applies a force equivalent to several thousand G's, which reduces the settling time of the particles. It is also favoured to maintain a large G-force, which will result in an improved separation. The rate at which sedimentation occurs is an important characteristic of the decanter centrifuge separation process.

Decanter centrifuge - Wikipedia

decanter centrifuge | eBay

Alfa Laval - decanter centrifuge technology 5 Solids deposited on bowl wall Conical beach section Erosion-protected solids discharge ports Inlet tube How a decanter centrifuge works A decanter centrifuge separates solids from one or two liquid phases in one single continuous process. This is done using centrifugal forces that can be

Alfa Laval - decanter centrifuge technology

The decanter centrifuge will often produce better results than other dewatering equipment when secondary or biological sludges are present in the material to be processed. The primary reason for this is decanter centrifuges do not use filter media for separation and dewatering, which can often become blocked or blinded by biological sludges.
